

What's Next #1

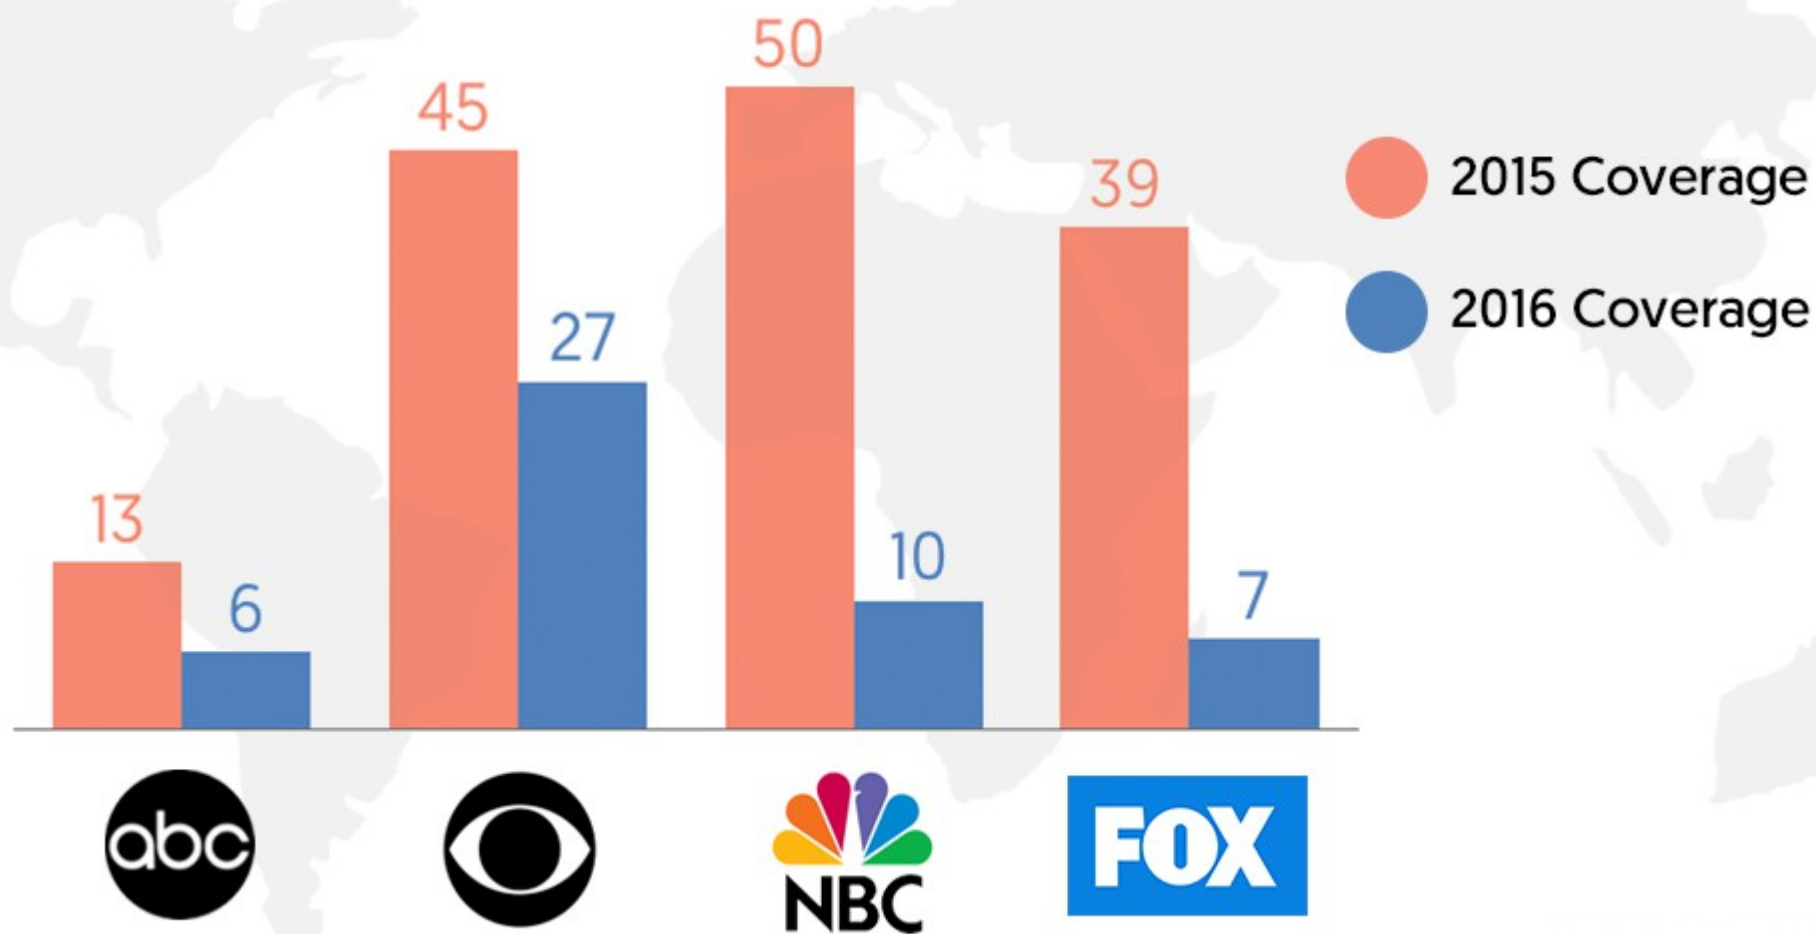

Involve other Groups

What's Next #2

- Encourage schools to include climate change in the curriculum
- Presentations to and with other groups
- Increase Media coverage
- <http://grist.org/briefly/major-tv-networks-spent-just-50-minutes-on-climate-change-combined-last-year/>

Total Coverage Of Climate Change In 2015 And 2016

Number Of Minutes On ABC, NBC, CBS, & FOX*

*FOX does not have a nightly news program

Next Steps #3

- Talks to students

Next Steps #4

- Involve the private sector
- One day sessions with other groups

Next Steps #5

- Lists of things that should be done
- Another foresight exercise

Next Steps #6

- Respond to requests for input
- Casual conversations
- Games and models
- More use of social media

Next Steps #6

- Respond to requests for input
- Casual conversations
- Games and models
- More use of social media

How to Defeat Those Who Are Waging War on Science

- Inclusive vision
- Get Political
- Avoid culture war trap
- Balance facts with meaningful stories
- Be forceful

Climate Change Deniers

I heard on a recent debate that all the man made co2 from the planet is about 30 billion tons per year. In order to raise the temperature 1 degree F it would take 1 trillion tons of co2 per year. So if we did away with all man made , co2 from cars, planes, trains, busses, heaters, factories, ect.....for 30 years, we could save that 1 degree rise in temperature. This is how ridiculous it is. CO2 is good for the trees and trees make oxygen, voila.
