

13:20:18 From Paul Beckwith To Everyone:

Q: What are the COR positions on CDR (Carbon Dioxide Removal) and on SRM (Solar Radiation Management)?

13:31:38 From Richard van der Jagt To Everyone:

C: Reduced social tension won't happen with Trump in the Oval office.

13:34:59 From Andrew Gaines To Everyone:

Q: The oceans have 50 times as much CO₂ as the atmosphere. Neither sequestration nor reducing emissions will reduce atmospheric CO₂ within a time frame that matters. Any reduction will be replaced by outgassing from the oceans. Does your model take account of this?

13:44:52 From Dave Dougherty To Everyone:

Q: What is the probability that more than half of countries would adopt the Earth4All approach?

13:47:41 From Sandrine Dixson-Declève To Everyone:

A: Agree Trump in office is a disaster, but so will be a European shift in the European Elections. We must fight both and not assume this will not happen.

13:47:45 From Derek Paul To Everyone:

C: Population is a much more urgent problem than you suggested. Only one of the world's countries has a population policy in agreement with its citizens. Of the five other major countries that had tiny population declines, four of the prime ministers wanted to see their birth rate increase!

13:53:01 From Claude Buettner To Everyone:

Q: Does the Earth for All modeling group collaborate or communicate with the Integrated Assessment Modeling consortium (<https://www.iamconsortium.org/>), which has informed the efforts of the Network for Greening Financial Systems (<https://www.ngfs.net/en>), a creation of the G20? How do our approaches differ and how are they similar?

13:53:11 From Madeleine Aubrey To Everyone:

Q: Thank you, Sandrine, for this very rich presentation and all the work you have done. Sandrine, given the impact that inequality can you give us the names of groups that are working towards greater equality that perhaps some of the CACOR members or their standing committees can tap into?

13:55:11 From Richard van der Jagt To Everyone:

C: It would be good to get Sandrine to join What-to-do, but I suspect she is overloaded already.

13:55:44 From Dr. Barry Bruce To Everyone:

Q: I have a question relating to agri-food solutions.

13:55:59 From David Harries Canada To Everyone:

C: Interoperability NOT integration; the guaranteed path to dumbing down the best.

13:58:50 From Sandrine Dixson-Declève To Everyone:

A: @Paul Beckwith the CoR does not have an official position on carbon capture, CDR or solar radiation, but I worry that these are distractions from real systems change and a shift from an extractive economy and economic change and in the case of solar radiation this could become catastrophic because there is no governance structure at all.

13:59:15 From Claude Buettner To Everyone:

Reacted to "@Paul Beckwith the C..." with 👍

13:59:42 From Richard van der Jagt To Everyone:

C: Good point, Paul. This is something What-to-do could adopt as something to tackle.

14:00:11 From David Harries Canada To Everyone:

Q: Politics is local. Well-being is local. How can civil-society/bottom up effort enhance the E4A effort which seems mostly top-down?

14:01:48 From Bill Pugsley To Everyone:

Reacted to "Politics is local. W..." with 👍

14:04:22 From Ann (unknown person) To Everyone:

Thank you, Sandrine, for providing this update on Earth4All. This illustration of the importance of translating and integrating available knowledge as a basis for action reminds us that we require fundamental societal and economic change to address climate change.

14:06:14 From Paul Beckwith To Everyone:

C: Somebody removed my question in the chat. It was the very first question asked. Why was it removed??? Weird.

14:06:39 From Sandrine Dixson-Declève To Everyone:

A: @David we are working directly with WeAll, Doughnut labs, and local organisations in different countries.

14:11:24 From Hunter Lovins To Everyone:

C: "In all the NGO world, we are always our best enemies. Screaming at each other for nuances while the evil ones lean back and smile."

14:14:56 From Claude Buettner To Everyone:

Replying to "Somebody removed my ..."

The one on CDR? Sandrine answered in the chat above, Paul.

14:16:22 From Sandrine Dixson-Declève To Everyone:

C: Apologies for not being able to answer all of your questions. Happy to follow up and wishing you all a wonderful day and continuation of your activities!

14:17:17 From Sandrine Dixson-Declève To Everyone:

Thank you very much, Anitra and Ted, for your leadership and these incredible webinars!

14:17:29 From Claude Buettner To Everyone:

Reacted to "Thank you very much ..." with 👍

14:22:34 From Bill Tyson To Everyone:

C: Sandrine implied that much of the decrease in the population growth rate reflected natural disasters and pandemics. Interesting. Population must decline, but it would be better that it would be by choice rather than circumstance. Our political leaders overwhelmingly do not see the problem. Here in Canada, there is a proposal to increase immigration to totally unsustainable levels and even an academic club that promotes a doubling of population. This is madness, and we must make more noise about it.

14:24:23 From Claude Buettner To Everyone:

Replying to "Sandrine implied tha..."

C: I suggest that this "movement" is the result of someone's conclusion that this growth through migration can't be stopped so the country might as well plan for it.

14:28:24 From Bill Tyson To Everyone:

Replying to "Sandrine implied tha..."

C: Claude, to precis your comment, population pressure on the "developed" world from the poorer world (resulting from crowding and lack of opportunity leading to mass migration) is inevitable. Maybe so, but we can help by educating women and alleviating poverty that demonstrably lead to reductions in family size.

14:28:41 From Rosemary Kralik To Everyone:

Replying to "Sandrine implied tha..."

C: I'm delighted with this presentation. It has given me hope. I still cannot participate either because of my equipment or my service. I'm happy that my 30 yr. efforts in regenerative agriculture is slowly being recognized as productive activity.

14:34:23 From Claude Buettner To Everyone:

C: MIT scientist Dr. Noah Planavsky's excellent presentation on his efforts to make practical Carbon Sequestration in soil < <https://www.youtube.com/watch?v=zdVV9AjWgLC&t=383s> >. He's honest enough to admit the carbon won't really be permanently sequestered for a century when soil erodes to ocean.

14:34:33 From Bill Tyson To Everyone:

Replying to "Sandrine implied tha..."

C: Kudos to you, Rosemary.

14:35:55 From Dr. Barry Bruce To Everyone:

C: I don't disagree with a multi-pronged approach that moves toward the elimination of fossil fuel contributions, but we must also move away from conventional agriculture toward regenerative agriculture, and reducing the amount of land under cultivation
