Phil Reilly will handle the Q&A session. Please put your questions into chat for Phil

14:31:41 From Jon Legg To Everyone:

(Q) Q) Some of us have adopted the philosophy of the Club of Rome (i.e. Limits to Growth) ten or twenty years ago. Paul Beckwith has exposed us to the problems that the COP system carries with it. Faced with disunity within the group that wants to lower GHG and a united and self-interested oil and gas industry, should CACOR try to focus the message to try to communicate? I believe that the global practice at present is to use individual countries as the basis for global decisions, i.e., what the UN does. That being the case, I see a strong argument to try to freeze Alberta out by supporting the federal government's general practice now, but with more vigour. What is the reaction of those on this Zoom meeting?

14:51:23 From Samrat Bharadwaj To Everyone:

Not a question. But India's agrarian economy has been collapsing for more than two decades now. Thanks to rampant neoliberalism and open market policy.

14:53:00 From Peter MacKinnon uOttawa Engineering To Everyone:

Q: Quentin, have you come across the concept of Planetary Boundaries and have you integrated your thoughts of integrating your work into this concept? BTW, It also links to UN SDGs. Thanks

15:01:27 From Samrat Bharadwaj To Everyone:

At during this COP, on a particular panel, some people were trying to sell Catamarans.

As survival vessels?

15:03:32 From Samrat Bharadwaj To Everyone:

Replying to "At during this COP, ..."
I think as a high-class option yes

15:06:09 From Quentin Grafton To Everyone:

Hi Peter yes I'm aware of the planetary boundaries and their latest work that includes a water boundary (blue and green). Unfortunately I think their numbers around these water boundaries are not correct. That is not to say there isn't a blue water boundary (or limit) but what it is best found elsewhere.

Hmmm, a good pirate ship for someone someday...

15:11:36 From Peter MacKinnon uOttawa Engineering To Everyone:

C: COP should include Mayors of major cities, with over 70% of GHGs come from cities!

15:11:54 From Quentin Grafton To Everyone:

Hi Samrat, I agree that agriculture imposes big costs (CO2, water abstraction, pollution, soil degradation) and this is worse in some places than others. It requires 'smart' agriculture that does it best to minimise inputs and bad outputs.

15:13:58 From Samrat Bharadwaj To Everyone:

Hi Quentin Grafton. Thanks for your reply. All I meant, because I am Indian, is that India's agrarian economy is collapsing, in terms of output, land productivity.. farmers committing suicide. 90,000 approximately in between 2001-2015. Yet, Thanks for your presentation. Was very succinct.

15:16:51 From Quentin Grafton To Everyone:

I agree with you Art re: governance. Polycentric governance and deliberative governance are ways forward which is about empowering communities to adapt to global changes at a local and regional level.
