

01:18:37 Richard van der Jagt, MD Shortages of chemotherapy were not uncommon

01:29:00 Paul Beckwith:  
Can you elaborate on the 35C wetbulb temperature. It's derived from core body temperature of 37C (98.6 F) with heat loss leading to 35C skin temperature, and inability to sweat with 100% air humidity. It's theoretical. Most people have severe problems at a wetbulb of 31 or 32C. Very young and very old are even more vulnerable, with lower limits.

Company in India sells chill suits (cooled by battery packs running TE (thermoelectric solid state chips), no movable parts. Astronaut suits; Water cooled suits etc.?

01:30:30 Claude Buettner: Replying to the above question:  
These suits will only be for the rich.

01:33:09 Paul Beckwith: Replying Companies can supply cooling to their outdoor workers if they want anything done.

01:30:49 Richard van der Jagt, MD: Q: Can you comment on the contribution of health care institutions to climate change?

01:32:30 Art Hunter: If CACOR was to update its 2019 Plan to Survive, what would be your top 3 health preparations a person could do.

01:36:14 Anitra Thorhaug: What do you think are the top 3 problems of Climate change for Canadian Health?

01:45:26 John Hollins: What Did COP-28 actually achieve? Is worth continuing COPs? Especially given the platform it provides for FFs.

02:04:38 Richard van der Jagt, MD replying to what you can do to survive: Get PPE for this year. It is predicted to be a bad year for fires stock pile water supply, dried foods, medications, batteries

02:09:47 Claude Buettner: Replying to "If CACOR was to upda..."  
Use this website with a bit of skepticism, but here's a preliminary suggestion for medicines needed for the Plan to Survive:  
<https://collapsesurvivalsite.com/medicines-that-will-be-priceless-after-the-healthcare-system-breaks-down/>

Again, use this website with some skepticism but here's a suggested list of things that will be priceless during long-term emergencies:  
<https://collapsesurvivalsite.com/things-that-will-be-priceless-after-the-collapse/>

02:20:43 Keith Kennedy: <https://reclimate.ca/effective-climate-communication-for-seniors/>

02:24:48 Richard van der Jagt, MD: Making public transit free would have a huge impact, especially if it is electric public transit

02:27:02          Raymond Leury: Free public transit in Ottawa would mean a 12% increase in taxes...which for many households would cost LESS than the bus passes they now buy.
