

13:48:09 From Richard van der Jagt to Everyone:

C: Think of the plastics and PFAS in the water!

14:01:52 From Ruth Waldick to Everyone:

C: Coastal BC has privately managed water providers.

14:02:54 From Meg Sears to Everyone:

C: You're absolutely right, Maude. Ironically, it was a "win" when sugary drinks were replaced with bottled water in community centres and schools (I guess that schools got paid to host the machines).

14:08:07 From Dave Dougherty to Everyone:

14:09:54 From Jon Legg to Everyone:

Q: There is much that has been said about the human right to water, but, in these days of dangers coming from the damage we have done to our environment. What about water as a threat? Having gone down the wrong path as far as the Club of Rome is concerned, we should have heard, for example, about freedom from damage caused by flooding, especially flooding caused irresponsibly. Have you heard, in UN circles, about water as a threat?

14:11:26 From Ted Manning to Everyone:

Q: Is there any circumstance where water can be exported? For example to water short states for good causes? Some water flows directly off land into the sea--and when we looked for possible means to help small island states to resist seasonal drought some time ago, one solution was direct export of Canadian drinking water from such sites.

14:13:09 From Ruth Waldick to Art Hunter CACOR(direct message):

C: Nature-based approaches are stumbling because governments are not set up to accept these methods, even when it is logical, possible, and funded.

[Water has long been used as a tactical weapon in warfare – the world now has a chance to end this \(theconversation.com\)](http://theconversation.com)

14:34:09 From Dave Dougherty to Everyone:

C: Causing deliberate flooding rarely changes the course of a conflict – but it does cause widespread death and destruction, especially among civilians. That is why using water as a weapon should be banned under international law.
